## INNOVATION THAT MATTERS

## Fully Integrated Supply Chain

1. Natural gas, air and water are the building blocks of our supply chain. We use these precious natural resources to make Anhydrous Ammonia which is then used to produce the chemicals used down-line to make PETN, ANFO, Emulsion oxidizer, and ultimately, all of our finished goods.
2. We engineer, build, operate, and maintain our specialized equipment.
3. Product is strategically stored in company operated locations to support our customers' operations.
4. Our teams make safe, on-time deliveries using our company-operated fleet.
5. Our team of Technical experts provides shot planning services to maximize your ROI.
6. Our Austin blasters and operating crews provide down-hole services to ensure your site has safe, reliable, and efficient blast results.

**USED IN 1833  
& EVER SINCE**
